

WHAT'S ON THE INSIDE OF AMBLUE II

JPL's AMBlue II is a high quality flexible duct that is specifically engineered to fight mold and provides real results.

AMBlue II antimicrobial flexible air duct is constructed with a distinctive inner core treated with Agion® natural silver to resist microbial growth. A unique blue reinforced vapor barrier surrounds the entire duct.

Although the distinctive blue color of JPL antimicrobial flex duct helps it stand out, it is the Agion® natural silver treatment that resists microbial growth and reduces mold infestation on the surface of the inner core.

60+ YEARS

Success, Growth and Innovation

JP LAMBORN COMPANY

JP Lamborn Company has been manufacturing flexible air duct since 1961. The company's success and growth has been built on a strong reputation of providing quality, integrity, competitive pricing and innovation.

JP Lamborn Company currently serves customers from four, state of the art manufacturing plants located in California, Colorado, Tennessee, and Florida.

JP Lamborn Company proudly offers all it's insulated flexible ducts & thermal sleeves with a 10-year limited warranty, UL listed and Certified R-Values.

HARDI

Specifications subject to change without notice.
Proper installation of these products to be in accordance with UL-181 and ADC recommended guidelines. Installation instructions in each package.

Antimicrobial Air Duct AMBlue II

Protect Your Home & Family

THE SMARTEST ANTIMICROBIAL ON THE MARKET **Period**

AGION® ANTIMICROBIAL

Hands down, Agion® is the "smartest" antimicrobial in the industry, only activating when it needs to defend against microbes.

Leveraging copper and silver antimicrobial technology, Agion® is designed to automatically release its antimicrobial components when conditions for bacteria growth are present. Agion® Antimicrobial utilizes a unique zeolite and ion exchange process to deliver highly efficient antimicrobial performance. Agion's unique zeolite carrier extends the effective benefits over other antimicrobials.

This capability results in the longest lasting protection against mold and microbes. Silver has long been known for its natural antimicrobial properties. Agion® technology is proven to be safe and long lasting with no harmful or toxic affects to people, plants or animals. Agion® is EPA registered for use in heating, ventilating, and air conditioning uses. Learn more www.sciessent.com

WHY CHOOSE AMBlue II

Experts believe indoor air quality (IAQ) has become worse than outdoor air. When moisture is present in an HVAC system, the potential for odor causing mold, fungi and mildew exists. A mold infested HVAC system may lead to large scale remediation, related cleanup costs and possible health issues.

JPL partnering with Agion®, a leader in antimicrobial solutions, developed the first flexible duct specifically designed to resist mold, fungi and mildew on the surface of the inner-core (air-stream).

Millions of feet of AMBlue II have been successfully installed without a single report of mold, fungi or mildew.

AMBlue II is Greenguard Indoor Air Quality Certified as "Highly Mold Resistant." AMBlue II is also energy efficient, made with R8 insulation and near zero air leakage when properly installed.

AMBlue II Features and Benefits

Underwriters Laboratory (UL)

AMBlue II carries the most recognizable and respected name in product safety and quality.

EcoTouch® Insulation For Flexible Duct

AMBlue II is Formaldehyde Free and manufactured with Owens Corning insulation. EcoTouch is a thermal and acoustical fiberglass insulation bonded with a thermosetting resin for the ultimate durability and delamination mitigation.

Silver - Naturally Occurring Antimicrobials

Permanently applied on the inner core (air stream) side of the flexible duct to specifically resist microbial growth.

Greenguard "Gold" Certification

AMBlue II is Greenguard "Gold" certified by a third-party independent IAQ testing lab for the highest standard in antimicrobial protection.

Mold is Serious Business

It is important to regularly inspect your duct work for leakage, dirt or mold. You owe it to your family and yourself to gather information on the benefits of flexible duct with antimicrobials versus the staggering costs of remediation, the potential health issues and cleanup cost of moldy duct work.

AMBlue II offers you, the homeowner, an increase in property value and peace of mind for a small price. Compare the installed cost of a conventional air distribution system with AMBlue II.
You be the judge.
